## **MICROPROCESSOR COMPONENTS LIBRARY**

### **SCHEMATIC SYMBOLS**

This manual and the Microprocessor Library Parts Diskettes comprise the P-CAD Microprocessor Part Library.

This manual includes information on how to use the library; general information about the library; component lists by sequence, function, and file; and component plots.

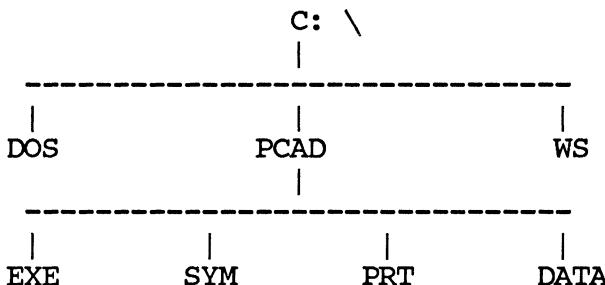

The library diskettes contain the component files, a layer structure file, standard size sheet files, PC-PACK cross reference files, a special symbol file, and padstack files.

## **HOW TO USE THIS LIBRARY**

This section describes a recommended directory structure and steps in creating a design.

### **DIRECTORY STRUCTURE**

In order to conserve space on your hard disk, and increase performance, it is recommended that you store library components within a directory structure. This structure should be tailored to your particular applications and design methodologies. The following example illustrates how this is done.

In this case symbols are stored in the SYM directory. Parts are stored in the PRT directory.

### **CREATING A DESIGN**

To use the library in a design, start PC-CAPS or PC-CARDS. After the menu is displayed, load the correct layer structure. You can load the layer structure supplied with the library, or you can load one of the drawing sheets on the diskettes (A, B, C, D, or E size).

## How to Use This Library

Then you can create the design by entering components, wires, text, instance, and net names.

For each PC-CAPS Symbol, there is a corresponding PC-CARDS Part. These are supplied on separate libraries. Both Symbols and Parts contain the electrical "intelligence" required for creating schematics, extracting data, and laying-out printed circuit boards.

Although P-CAD has gone to great effort to carefully verify the integrity of this information, P-CAD is not responsible for the usage of this library, or damages resulting from any technical inaccuracies. P-CAD may make improvements and/or changes in this product at any time and without prior notice.

This library has been developed at the request of our users, and we welcome any suggestions regarding improvements, or other libraries that are desired.

## GENERAL INFORMATION

This section provides general information about various aspects of the P-CAD Microprocessor Library, including the layer structures, assignment of symbol attributes, and signal naming conventions.

## General Information

### INFORMATION ON COMPONENT PARTS

Library Component Parts are created with the pin types shown below. Special types 5 or 6 are used when pin 1 is used as power or ground. These numbers are shown for each part in the component plots section.

<u>TYPE</u>	<u>FUNCTION</u>	<u>SHAPE</u>
1	PIN 1 I.D.	SQUARE
2	STD PIN I.D.	ROUND
3	STD. GROUND	ROUND
4	STD. POWER	ROUND
5	PIN 1 POWER	SQUARE
6	PIN 1 GROUND	SQUARE

### INFORMATION ON SPECIAL PACKAGES

Special Quad packaged microprocessors i.e., 80186, 80188 and 80286 follow these conventions:

1. The symbols are shown in dip form.
2. The parts are shown as four sided.
3. The standard symbols and parts reflect the 68 Lead Ceramic Pin Grid Array Package Type CG.
4. The alternate symbols and parts "T" reflect the Textool 68 Lead Chip Carrier Socket.
